Hello Christine,

I am abutter to the subdivision application on Colburn Rd (Lot 37 on Map 2B) and I have concerns about how the wetland survey was conducted. I went out to the wetland delineation markers and measured towards the property. I also took photos. From one wetland marker there is standing water 16' closer to their property, and at another we measured 45'. This is a huge variance from the survey included in the application and I would like someone to take a look. This impacts the buffer for septic and for where building is allowed.

Please let me know how this can be addressed. I can be reached via email or at [REDACTED].

Thanks,

Heather
